## Conceptual Physics Vote for Second Partial Test

During the second partial test next week, you will take the same test twice: First individually, then in groups of 3. Your grade for the test will be either

All Individual Grade **OR**  $2/3$  Individual +  $1/3$  Group

Whichever is greater. It is possible to construct either random groups, or I can organize the groups based on grades to “even out” the groups. Which would you prefer? Please circle your preference.

- Random Groups
- Assigned Groups
- I don't care

In the event of a tie, I will use the results of the last vote (which was in favour of random groups) to determine the method. This means groups will be assigned randomly.
